

OTB implementation jump start kit

A portable operating and implementation brief for Adam Abdalla and On The Boulevard Shopping Center.

Recommendation

Continue evidence reconciliation in ChatGPT Work and implement the shared registers and controls in Codex. Begin with Lease Reconciliation, OTB-CMD-001. The kit supplies the architecture, source context, seed records, exception queue, tests and startup prompts needed for a new session.

20 lease groups	27 suites	47 local files
One row per lease relationship. Combined suites are counted once.	24 rent-bearing, 2 vacant and 1 owner-occupied, as reported in the September 23 roster.	36 PDFs / 833 pages inventoried. Inspection was targeted; not every page or renewal chain was reverified.

Current release status

Bootstrap package prepared; live implementation and contractual verification remain open. The prior conversation classified 13 relationships VERIFIED and seven with lease evidence exceptions. Those are historical findings. This inspection found conflicting dates, incomplete signatures and a rent discrepancy in local copies; it does not reaffirm all 13.

Operating schedule

September scheduled rent remains \$88,310.33 per month, matching the dossier rows. Clothing Loft is \$6,654.68 through September; the reported renewal amount of \$6,690.83 begins October 1. No billing or payment record was changed.

Release date 2026-09-27 UTC | Private operational context | No standing authority grants

Keep sources and decisions distinct

Layer	Purpose	Boundary
Evidence	Original sources, observations, execution counterparts and dated search receipts.	Preserve originals, locators, hashes and scope. A filename is not authority.
State	Accepted operating representation of a particular fact at a particular time.	Record effective dates and unresolved alternatives. New evidence does not silently mutate state.
Memory	Reusable knowledge derived from experience and validated learning.	Memory cannot override governing evidence or create permission.
Insight	Analysis, recommendations, predictions and model inference.	Label inference. Adoption requires the appropriate decision and authority.

Execution lifecycle

Command > context and evidence > authority check > executor or workflow > gates and verification > receipt > state and exceptions > validated learning. External effects must have a specific authorization basis and a durable outcome record.

Twelve primitives

Command, Goal, Context, Evidence, Authority, Executor, Workflow, Judgment, Gate, Receipt, Exception, Learning. Goals describe desired outcomes; workflows define repeatable procedures; agents handle bounded judgment within the same rules.

Replaceable execution engines

Work, Codex, scripts, applications and future agents use the same record contracts. Keep domain rules and acceptance checks outside any single model or vendor. The first implementation can remain local files with deterministic validation; a database, graph or autonomous agent hierarchy is not required.

Sources: docs/CCES_v1.md and docs/architecture.md. CCES sections 1-39 preserve the recovered source text; the incomplete section 40 boundary and practical installation extension are explicitly labeled.

Scope every action and retain a receipt

Level	Meaning	Gate
A0	Observe	Read, inspect, search, summarize and analyze without changing source records.
A1	Prepare	Draft and calculate proposed outputs; no live state mutation.
A2	Internal Change	Modify approved internal records only within a defined scope.
A3	External Communication	Use explicit policy and authorization for the communication.
A4	Business Commitment	Human approval by default, unless a narrow written rule permits the exact action.
A5	High-Risk / Irreversible	Contracts, payments, termination, deletion and legal/security changes require the applicable explicit authority.

No implicit grant

The six levels are classifications, not permissions. `authority.json` is intentionally empty. A grant must identify the actor, entity, asset, command, value limit, tools, exclusions, expiration and approver. The user request authorizes preparation of this kit, not future external execution.

Receipts and exceptions

Every execution records sources, facts, assumptions, attempted/completed/failed actions, changes, approvals, artifacts, result and next action. Imported historical receipts are marked `imported_prior_claim` and cannot close current exceptions. Unknown timestamps and costs remain null.

An exception has an owner or explicit unassigned state, materiality, blocker, competing evidence and exact closure requirement. A resolution needs evidence, an authorized decision where applicable, and a receipt. Accepted risk is distinct from resolved.

E0 Unknown | E1 Informal | E2 Business Record | E3 Governing Record | E4 Verified External Authority. These evidence classes are independent of action authority A0-A5.

Canonical register snapshot

One row per relationship. Amounts below preserve the September operating schedule. Dates are adopted or reported dates; see the machine-readable field provenance and local findings before relying on contractual effect.

Suites / tenant	Monthly USD	Adopted end	Current evidence status
101+103 The Pink Paisley	\$16,008.90	2027-02-28	Local term supported
105 Painted Bayou	\$3,231.16	2029-03-31	Signed renewal open
107 Great American Cookies / Hershey's	\$2,541.88	2027-03-31	Local conflict / gap open
109 JC Kate Boutique	\$3,808.39	2028-09-30	Term evidence open
111 BERNINA Lafayette (Lola Pink)	\$2,605.42	2027-01-31	Local term supported
113 Graze Acadiana	\$4,017.58	2027-06-30	Local conflict / gap open
115+117 The Clothing Loft Exchange	\$6,654.68	2029-09-30	Renewal source not local
117.5 Victoria Nails	\$2,800.92	2029-02-28	Renewal + math open
119 OUPAC Financial	\$2,890.42	Unknown	Current term unknown
119.5 Cat Clinic of Lafayette	\$3,035.03	2029-02-28	2026 renewal open

Clothing Loft future renewal: \$6,690.83/month from October 1, 2026 through September 30, 2029, reported by the prior review. Local collection contains the older base lease; recover the specific executed amendment.

Source notes and exception IDs: installations/otb/registers/lease-register.md and data/leases.json. Prior VERIFIED labels are retained separately; no current fact is validated merely because it was previously labeled verified.

Canonical register continued

One row per relationship. Amounts below preserve the September operating schedule. Dates are adopted or reported dates; see the machine-readable field provenance and local findings before relying on contractual effect.

Suites / tenant	Monthly USD	Adopted end	Current evidence status
121 Magnolia Salon	\$2,527.90	2031-12-31	Execution open
123 The Tux Shoppe	\$5,492.96	2029-12-31	Local conflict / gap open
125+127 Jordan Amanda by Shoetique	\$6,587.54	2028-04-30	Local conflict / gap open
129 HotWorx	\$2,832.58	2029-08-31	Local term supported
135A C. Wolf Barber Shop	\$2,040.83	2031-05-31	Local term supported
137 Greek Expressions	\$3,165.04	2030-10-31	Local conflict / gap open
139+141 Fast Pass Tag & Title	\$6,150.38	2029-07-31	Local term supported
143 1st Franklin Financial	\$3,354.75	2031-01-31	Local term supported
145 Upstream Rehabilitation	\$798.75	Unknown	Counterpart + dates open
149 Jason's Deli	\$7,765.22	2030-10-31	Local conflict / gap open

Upstream future phase: \$3,035.25/month from January 2027 is the owner-mapped operating schedule. Exact contractual commencement and expiration remain unresolved. Jason's Deli local addendum rent conflicts with the retained operating amount.

Source notes and exception IDs: installations/otb/registers/lease-register.md and data/leases.json. Prior VERIFIED labels are retained separately; no current fact is validated merely because it was previously labeled verified.

Seven inherited gaps remain open

Relationship	Local finding and next evidence
Painted Bayou	Historic executed lease ends March 2026. Obtain the signed renewal supporting March 2029.
JC Kate	Ownership and guaranty material is separate from the term renewal. Local first-addendum signature page is blank. Obtain executed term evidence.
Victoria Nails	Local history reaches the Third Addendum ending February 2026. Obtain signed Fourth Addendum and reconcile total/components/HVAC. Keep \$2,800.92 operating total.
OUPAC	Historic instrument has inconsistent effective and commencement dates. Locate current renewal, exercise or correction; expiration remains unknown.
Cat Clinic	Local extension ends February 2026. Obtain signed 2026 replacement. Resolve \$2,500 versus \$1,500 HVAC replacement clauses separately.
Magnolia	Local draft has blank signatures and a signature-page tenant mismatch. Obtain correctly named both-party counterpart and dated escalation schedule.
Upstream	Local clean copy has a lessor signature and blank tenant signature. Locate both-party counterpart and delivery/permit dates for the earlier-of commencement trigger.

No new lease exception was closed by assuming an unreviewed counterpart exists or that a file name establishes execution. Search scope and the seven individual outcomes are recorded in the local reconciliation report.

Other operational gaps remain independent: compliance validity, recovery allocation, geometry/GLA, management attribution and parking reconciliation. The full machine-readable exception queue includes these items.

Preserve the competing local evidence

Relationship	Prior register	Local evidence / issue
Great American	End 2027-03-31	Local term clause states 2027-09-30. Establish governing version.
Tux Shoppe	End 2029-12-31	Local clause ends 2029-04-30; its rent grid also reaches April 2030. Internal and cross-source conflict.
Greek Expressions	End 2030-10-31	Local term clause states 2030-09-30. Do not silently replace either.
Shoetique	End 2028-04-30	Local term ends 2029-08-31 and tenant signature is blank. Locate both-party governing counterpart.
Graze	End 2027-06-30	Local older base term ends 2024-04-30; current renewal chain not established in inspected copy.
Jason's Deli	\$7,765.22 monthly	Signed local Fifth Addendum states \$8,553.27 for November 2025-October 2030. Keep operating amount pending review.

Additional source controls

GLA remains conflicting: 62,883 SF headline, 62,810 SF from the current listed suites, and 62,807 SF in an older workbook. The 94.9 percent occupancy figure remains a source-reported measure, not a newly reconciled denominator.

Victoria component totals differ between the dossier (\$2,830.40) and the later detailed chat (\$2,832.40), alongside the adopted \$2,800.92. Retain all alternatives until the controlling schedule is established.

Exact files, hashes, page locators, inspection methods and limitations: installations/otb/registers/local-lease-reconciliation.md. The presence of local conflicts does not prove that a later unseen Drive instrument is absent.

Build the smallest useful execution spine

Order	Deliverable	Acceptance
1	Validate existing seed contracts	All schema, reference, provenance and negative tests pass. Unknowns remain null; no standing grants created.
2	Implement read-only source intake	Stable source IDs, file hash, locator and version retained; duplicate files detected without destructive merges.
3	Implement candidate assertions and exceptions	Conflicting claims remain separate. Effective dates prevent future rent entering the current schedule.
4	Implement decision and receipt persistence	Append-only receipts; failed, blocked and partial results explicit. Historical imports cannot authorize current actions.
5	Add scoped authority and idempotent commands	Deny outside grants; require appropriate approvals. Replay cannot duplicate an action or lose an exception.
6	Prove Lease Reconciliation end to end	One existing exception advances from evidence through authorized change to receipt, with competing sources retained.
7	Add work order and invoice adapters	Only after lease workflow acceptance; payment and external communication stay independently gated.

Ignore for this release

A new dashboard, graph database, vector database, agent hierarchy, vendor-specific core, accounting replacement, source-vault migration and public deployment. Integrate with existing OTB systems after inspecting their current seams; do not create a parallel system of record by default.

Runnable now

From the extracted kit root: `python tools/validate_kit.py`; `python -m unittest discover -s tests -v`. Use `--manifest MANIFEST.sha256` for integrity verification. The offline validator needs Python 3.10 or later and no external services. Optional full JSON Schema validation has a pinned dependency in `requirements.txt`. No environment variables or API keys are required for the bootstrap.

Continue without the original chat

Work startup

Read README.md, the standard, operating spine, lease register and local reconciliation report. Pick an unresolved evidence question. Review exact sources and signatures, preserve current operating values, prepare the proposed assertion/decision and receipt, and identify the concrete missing evidence. Use WORK_HANDOFF.md for the complete workflow and prompt.

Codex startup

Read CODEX_HANDOFF.md and validate the kit. Inspect the existing repository before placing this bootstrap. Implement only the first bounded workflow and its acceptance tests. Keep original evidence immutable, grants scoped, receipts durable and external adapters replaceable. The exact staged order and prompts are in the handoff.

Artifact	Use
docs/CCES_v1.md	Recovered Execution Standard v1.0, with disclosed source boundary.
installations/otb/OTB_IMPLEMENTATION_001.md	Assets, state, decisions, exceptions, receipts and workflow priorities.
schemas/	Source authority, evidence, asset, state, decision, exception, receipt, command, workflow, authority, goal and lease contracts.
installations/otb/data/ and registers/	Machine-readable assertions, source notes, CSV projections and readable registers.
installations/otb/evidence/	Dated source snapshots, local file inventory and source pointers.
commands/, workflows/, tests/, tools/	Workflow specifications and runnable representation checks; not a deployed production engine.

Portability and limits

This kit carries the operating context and findings, not the entire source vault. Raw executed-lease PDFs, guaranties, bank authorizations and OCR images remain in the original local collection. The inventory preserves exact original paths and SHA256 hashes so a later session can request or reattach the specific counterpart it needs. Drive/email-only evidence is clearly marked as unreviewed or prior-session reported.

Source recovery: eight conversation turns retrieved; three long assistant messages truncated. Two Drive snapshots fetched this session. Local inspection was targeted. No messages were sent, billing changed, payments executed, authority granted or production system deployed.
