

**CYPRESS
COMMAND**

BRAND STANDARDS · VERSION 1.0 · SEPTEMBER 2026

Make the work easier to run.

Identity, messaging, applications, and operating discipline for a practical AI systems brand.

Practical intelligence for real operations.

PEOPLE + SYSTEMS + REAL WORK

00 HOW TO USE THIS GUIDE

One system. Clear roles.

This guide is the public-facing source of truth for the Cypress Command brand. It governs strategy, messaging, identity, and core applications. The separate transition plan is confidential and must not be copied into public materials.

USE THIS GUIDE FOR

Websites, proposals, reports, social media, email signatures, operating diagrams, dashboards, case studies, articles, and vendor handoffs.

APPROVAL PRINCIPLE

Keep the system restrained. If a new element does not improve hierarchy, meaning, recognition, or usability, do not add it.

Launch boundary. Name, mark, domain, handle, entity, credential, client, performance, security, integration, and compliance claims remain unverified until separately documented and approved. Do not add ® or ™ or imply legal clearance.

Reference board: one visual system applied across editorial, technical, archival, and digital expressions.

01 BRAND PLATFORM

What Cypress Command is

An AI-enabled operating systems partner.

Cypress Command helps owner-led businesses make essential work visible, repeatable, and easier to run. It connects people, workflows, data, software, and carefully applied AI around work that must actually get done.

PRIMARY AUDIENCE

Owner-operators and operating leaders at small to mid-sized companies that have meaningful complexity but no internal transformation function.

INITIAL PROOF DOMAIN

Commercial real estate ownership and management. It demonstrates fluency in assets, contracts, vendors, recurring work, financial decisions, and consequential handoffs.

Positioning

For owner-operators whose critical work is spread across people, inboxes, spreadsheets, documents, and disconnected software, Cypress Command designs and implements practical AI-enabled operating systems that make work visible, repeatable, and easier to run.

THE VALUE IS NOT MORE AI

The value is clearer operations with more capacity for the work that matters.

Differentiators

Operator fluency before technology	Start from responsibilities, decisions, contracts, cash, assets, customers, and risk—not a preferred software stack.
AI in service of the system	AI is one component within people, process, data, automation, review, and accountability.
Implementation, not theater	Translate operating decisions into useful workflows, tools, routines, documentation, and adoption support.
Calm rigor	Explain what changes, why it matters, who owns it, and how the result will be measured.

02 MESSAGE HIERARCHY

One idea per role

ROLE	APPROVED LANGUAGE	USE
Brand promise	Make the work easier to run.	Website hero, proposals, primary brand contexts
External tagline	Practical intelligence for real operations.	Brand sign-off and identity contexts
Launch campaign	Build AI into how you actually operate.	Launch creative and selected campaign modules
Category descriptor	AI-enabled operating systems for owner-led businesses	Search, bios, eyebrows, concise descriptions

PROMISE

Make the work easier to run.

TAGLINE

Practical intelligence for real operations.

CAMPAIGN

Build AI into how you actually operate.

Brand pillars

Practical intelligence
Intelligence becomes useful action, a reliable source of truth, and a clear next step.

People and systems, together
Human judgment and accountability remain explicit while systems reduce avoidable effort.

Real work, made visible
Recurring work becomes easier to see, own, complete, and improve.

A more capable tomorrow
The system compounds through stronger information, routines, and learning.

03

OFFER ARCHITECTURE

A simple commercial path

Assessment → Build → Partnership

The offers progress from a paid, bounded diagnosis to implementation and then measured ongoing improvement. The four delivery phases explain how each offer is delivered; they are not competing services.

01 · OPERATING SYSTEM ASSESSMENT

Establish a factual view of one priority operating area and decide what should happen first.

02 · OPERATING SYSTEM BUILD

Design, configure, test, document, and install the priority operating system.

03 · OPERATING PARTNERSHIP

Sustain adoption and improve the system as business needs change.

DELIVERY METHOD

01

Assess

See the work as it is.

02

Design

Turn the opportunity into a workable system.

03

Install

Put the system into real work.

04

Operate

Keep improving what is now part of the business.

SEE THE WORK · BUILD WHAT HELPS · MAKE IT STICK

Priority use cases

Recurring workflow management	Ownership, cadence, exceptions, and follow-through
Contract and document intelligence	Useful information prepared for accountable review
Reporting and decision preparation	Timely context, consistent inputs, and clearer signals
Asset and portfolio visibility	Operating status, open issues, priorities, and decisions
Handoff and follow-up systems	Less dependence on memory and inbox chasing
Business-development operations	Structured pipeline, preparation, and next-action discipline

04

VOICE AND LANGUAGE

Editorial. Precise. Calm. Practical. Human-led.

Cypress Command sounds like a trusted operator at the table: observant before opinionated, direct without being severe, and confident without theatrics.

DO	DO NOT
Lead with the business problem and the work being improved.	Lead with model names, novelty, or generic transformation.
Use concrete nouns: workflow, lease, vendor, forecast, decision, handoff.	Use inflated abstractions: revolution, disruption, synergy, next-gen.
Explain AI as an aid to organize, prepare, route, draft, and detect.	Imply AI decides, replaces accountable people, or runs the business alone.
Respect the reader’s experience and show a practical path forward.	Describe the current operation as broken, backward, or obsolete.
State boundaries, review points, and what remains human.	Promise certainty, autonomy, compliance, security, or guaranteed ROI.

Preferred language

Practical intelligence · operating system · real work · make work visible · dependable follow-through · clear ownership · useful automation · better signals · capable teams · measurable operating change

Avoid

Unlock · revolutionize · frictionless · autonomous enterprise · AI magic · replace your team · set it and forget it · guaranteed ROI · best-in-class · disruption · future-proof

AI boundary. AI may organize information, prepare work, identify patterns, draft, and route. Accountable people own decisions, relationships, exceptions, approval, and oversight.

The squared spiral C

The approved symbol is a single continuous squared spiral/C with a detached center terminal, taken directly from the uploaded brand pages. It represents command of the facts, connected systems, and a repeatable operating loop. The geometry is structured and compact rather than soft, decorative, or technological.

Approved configurations

PRIMARY HORIZONTAL

Website headers, proposals, reports, stationery, and first exposure.

REVERSED

Dark presentation covers, controlled photography, and Ink surfaces.

Clear space and minimum size

Use a minimum clear space of **2x** around every logo configuration, where x equals the recurring structural stroke width inside the mark. The emblem-only configuration may reduce to **1x** only in constrained interface chrome.

Configuration	Digital minimum	Print minimum
Primary horizontal	120 px wide	30 mm wide
Stacked	88 px wide	22 mm wide
Emblem only	16 px; prefer 20+	5 mm; prefer 7+

Do not redraw, stretch, rotate, outline, crop, pattern, texture, shadow, or rebuild the mark. Do not add ™ or ® until counsel authorizes it.

06 COLOR SYSTEM

Ink on paper. Meaning in every accent.

Paper and Ink establish the environment. Terra is the primary action and editorial accent. Olive, Mustard, and Oxblood carry explicit status meaning; they are not a decorative rainbow.

Paper #F4EFE2 Primary surface	Paper Deep #E8E2CD Secondary surface	Ink #1E1B16 Primary text / dark surface
Ink Soft #5C554A Secondary text	Rule #C9BFA8 Dividers / structure	Olive #49573C Success / stable
Mustard #8F6D0C Progress / attention	Terra #A44E12 Action / editorial	Oxblood #8A2F1F Risk / critical

Accessible pairings

Pairing	Ratio	Use
Ink on Paper	14.95:1	All text and essential UI
Ink Soft on Paper	6.41:1	Supporting text and metadata
Paper on Olive	6.75:1	All text and icons
Paper on Terra	4.97:1	All text and icons
Paper on Oxblood	7.30:1	All text and icons
Paper on Mustard	4.19:1	Large/bold text and non-text UI only

Use a written status label or icon with every semantic color. Color alone is never the message.

07 TYPOGRAPHY

A classic voice for a practical system

The operating

system

Ideas to practice. Systems to build.

EDITORIAL DISPLAY

Libertinus Serif — headings, quotations, essays, cover statements, and key editorial numbers.

FUNCTIONAL SANS

Inter — body copy, UI, labels, navigation, diagrams, tables, and the wordmark.

FALLBACK

Georgia for serif contexts; Arial or Helvetica for functional sans contexts.

Type scale

Style	Family / weight	Desktop	Mobile
Display	Libertinus Bold	64 / 64	44 / 48
H1	Libertinus Semibold	48 / 52	36 / 40
H2	Libertinus Semibold	32 / 38	28 / 34
H3	Inter Semibold	24 / 30	22 / 28
Body	Inter Regular	16 / 26	16 / 25
Caption	Inter Medium	12 / 16	12 / 16
Eyebrow	Inter Semibold	11 / 14	11 / 14

A canonical page begins with a small Inter eyebrow, a substantial Libertinus title, and an Inter deck. Limit display text to 8–12 words and no more than three lines.

Structure before decoration

Grid and spacing

Use a 12-column desktop grid, 8-column tablet grid, and 4-column mobile grid. Start from a 4 px micro-unit and an 8 px rhythm. Approved spacing values are 4, 8, 12, 16, 24, 32, 48, 64, 96, and 128 px.

RULES 1 px Rule for ordinary structure; 2 px Ink for a major boundary or selected state.	RAILS 2–4 px semantic color at the top or left of a stage, card, chapter, or alert.	SURFACES Paper or Paper Deep, square or minimally softened corners, and no default shadows.
--	---	---

Imagery

Use real places, real people, and real progress: operating teams, storefronts, regional commercial real estate, worksites, material details, planning sessions, records, and built environments. Favor natural light, practical viewpoints, restrained grading, and compositions with quiet space.

Avoid generic server racks, glowing blue AI graphics, robots, holograms, synthetic faces, staged handshakes, neon, gratuitous technology motifs, and overly polished lifestyle imagery.
--

Diagrams and data

Every diagram states its point, defines inputs and outputs, shows one reading direction, makes ownership and review visible, and ends with an observable outcome. Data visualizations use Ink as the primary series, Rule as structure, and one semantic ink for the explained highlight. Label directly where possible.

09 DIGITAL SYSTEM

Functional, calm, and explicit

PRIMARY ACTION

Start an assessment →

Terra fill, Paper label, 44 px minimum target, one clear action.

SECONDARY ACTION

See what we build

Paper surface, Ink border, explicit label, visible focus treatment.

- COMPLETE
- IN PROGRESS
- ACTIVE
- BLOCKED

Component rules

Inputs use an always-visible label, Paper surface, 1 px Rule border, 44 px minimum height, and clear help or error text. Status chips include a written label. Controls support keyboard access, visible focus, reduced motion, and text resizing. Motion is short and functional; decorative loops and parallax are prohibited.

Dark mode

Use Ink as the canvas, Paper as primary text, and Paper Deep as supporting text. Recessed surfaces are low-opacity Paper Deep over Ink. Terra remains the primary action. Semantic colors keep the same meaning. Avoid pure black, electric blue, glass effects, neon, and indiscriminate inversion.

10

CORE APPLICATIONS

One system, four expressions

Expression	Primary jobs	Operating rule
Editorial	Brand, web, proposals	Generous Paper space, strong serif thesis, measured imagery, one clear next action.
Technical	Flows, SOPs, systems	Numbered modules, direct arrows, explicit inputs, owners, review, outputs, and iteration.
Archival	Articles, reports, research	Figure labels, captions, evidence-led tables, quiet quotations, and useful metadata.
Digital Command	Dashboards, portals, UI	Inter-led navigation, calm cards, visible states, strong hierarchy, and no decorative dashboard clutter.

Application standards

Website hero Use one proposition, one supporting paragraph, no more than two actions, and authentic operating context.	Proposal cover Use a specific operating-system title, one Terra spine, disciplined metadata, and client/Cypress credits.
Thought leadership Lead with a useful thesis, relevant image or figure, narrow reading measure, and clear source context.	Dashboard Present consequential metrics, direct units and status, evidence-led charts, and a small set of actions.
Operating flow Show Assess, Design, Install, Operate, followed by a visible continuous-improvement path.	Critical alert Use Oxblood only for genuine risk, include a recovery action, and never rely on color alone.

Make the work easier to run.

HOMEPAGE HERO

Make the work easier to run.

Cypress Command builds practical systems that connect people, workflows, data, and AI around the work your business depends on—so your team can act with more clarity and capacity.

Start with an operating system assessment

See what we build

Supporting modules

PROBLEM

Real work rarely lives in one system. Important work moves through people, inboxes, meetings, documents, spreadsheets, and software. Cypress Command makes that operating reality visible before changing it.

APPROACH

Build the system around the work. We begin with decisions, handoffs, exceptions, systems, and people—not with tools. Then we install the smallest useful system and improve it with the team.

AI ROLE

AI where it is useful. People where judgment matters. AI supports preparation, organization, pattern detection, drafting, and routing. People retain accountable control.

CLOSING CTA

Start with the work that is hardest to run. Bring one process, bottleneck, or operating question. We will help determine what is worth changing and what should remain human.

12

PROOF AND CLAIMS

Show the work. Do not overstate it.

Use operator depth across commercial real estate, contracts, finance, operations, business development, AI systems, and automation only after the precise biographical statement is verified. Legal experience may support operational judgment; it must not imply legal advice or representation.

Do not claim	Required boundary
Autonomous operations or “runs itself”	State the human owner, review point, exception path, and approval authority.
Guaranteed savings, revenue, time reduction, or ROI	Use client-specific measured results only with baseline, method, timeframe, context, and permission.
Secure, compliant, private, or risk-free	Describe reviewed controls only; do not imply a certification or guarantee.
Best, leading, first, proprietary, or proven at scale	Use plain descriptions and evidence that can be shown.
Named clients, metrics, testimonials, credentials	Verify accuracy, approval, permissions, and substantiation before publication.

Case-study proof standard

Every case study includes context, operating problem, work completed, system built, adoption approach, measured result, client quote if permissioned, and the work that remains under human judgment. A precise qualitative result is better than an unsupported percentage.

Mandatory launch blockers:

professional name and trademark clearance; a final legal-entity and trade-name decision; domain and handle control; documented verification of every factual public claim.

13 PRODUCTION AND GOVERNANCE

Make the system easy to preserve

Digital delivery

Use SVG as the web master and PDF/vector formats for print. PNG is a compatibility format, not the logo source. Export web assets in sRGB, include meaningful alternative text, test focus and contrast, and never embed essential body text in images.

Print delivery

Use final trim size with 3 mm / 0.125 in bleed when required, vector rules and icons, embedded or properly licensed fonts, and a physical proof for Terra spines or large Ink fields. Hex values remain the digital source of truth; printer-specific CMYK or spot equivalents require proofing and approval.

File governance

Keep one approved master folder. Archive superseded assets; do not overwrite them silently. Any new lockup, sub-brand, color, or mark alteration requires brand-owner review. Record version, owner, date, and intended use.

Asset	Master format	Use
Logo	SVG / PDF	Web, print, templates, vendors
Raster logo	PNG	Applications that cannot render vector
Color tokens	CSS / JSON	Web, product UI, design systems
Document templates	DOCX / SVG	Letters, proposals, cases, quick production
Messaging source	Markdown	Web copy, proposals, social, review
Migration plan	Confidential Markdown	Authorized transition team only

14 GLOSSARY

Shared language

Operating System Assessment: A paid diagnostic that establishes how a priority area currently runs and what should be addressed first.

Operating System Build: A scoped implementation that redesigns and installs a priority workflow, its information structure, and selected automation.

Ink: The primary text and dark-surface color, #1E1B16.

operating system: The practical combination of people, process, software, data, and carefully applied AI that helps a business run essential work well.

Paper: The primary light surface color, #F4EFE2.

Operating Partnership: A limited ongoing engagement that supports adoption, operating review, and system improvement.

proof domain: A field in which operating experience provides credible examples without limiting the broader market category.

semantic ink: An accent color whose use carries an explicit status meaning rather than decoration.

Terra: The primary action and editorial accent color, #A44E12.

Good systems do not replace human judgment. They give it room to do its best work.
